Theorem Definition Collorary Example Remark Note Given u,v,u projects onto $v,w=\sigma v$ where σ is the scala we have $v\perp (w-u)$

$$v \perp (\sigma v - u)$$

$$v^{T}(\sigma v - u) = 0$$

$$\sigma v^{T}v - v^{T}u = 0$$

$$\sigma v^{T}v = v^{T}u$$

$$\sigma = \frac{v^{T}u}{v^{T}v}$$

$$\sigma v = \frac{vv^{T}u}{v^{T}v}$$

$$\sigma v = \frac{vv^{T}u}{v^{T}v}$$

 vv^T is the projection matrix which projects u onto v where |v|=1

Concret Example: Let's project
$$u = \begin{bmatrix} 1 \\ 1 \end{bmatrix}$$
 onto $v = \begin{bmatrix} 0 \\ 1 \end{bmatrix}$

$$vv^{T} = \begin{bmatrix} 0 \\ 1 \end{bmatrix} \begin{bmatrix} 0 & 1 \end{bmatrix} = \begin{bmatrix} 0 & 0 \\ 0 & 1 \end{bmatrix}$$

$$Proj_{v} = \begin{bmatrix} 0 & 0 \\ 0 & 1 \end{bmatrix} \begin{bmatrix} 1 \\ 1 \end{bmatrix} = \begin{bmatrix} 0 \\ 1 \end{bmatrix}$$
