1.1 Searching 1 TEXT MANIPULATION

1.1 Searching 1 Text manipulation

1.1 Searching

/joe/e	cursor set to end of match
3/joe/e+1	find 3rd joe cursor set to End of match plus 1
/joe/s-2	cursor set to start of match minus 2
/^joe.*fred.*bill/	normal
/^[A-J]\+/	search for lines beginning with one or more A-J
/begin*end	search over possible multiple lines
/fred_s*joe/	any whitespace including newline
/fred\ joe	search for fred or joe
/.*fred\&.*joe	search for fred and joe in any order
/\ <fred\>/i</fred\>	search for fred but not alfred or frederick
/\<\d\d\d\d\>	search for exactly 4 digit numbers
/\D\d\d\d\D	search for exactly 4 digit numbers
/\<\d\{4}\>	same thing
/\([^0-9]\ ^\)%.*%	search for absence of a digit or beginning of line
/^\n\{3}	find 3 empty lines
/\(fred\).*\(joe\).*\2.*\1	using rexexp memory in a search
/^\([^,]*,\)\{8}	repeating the regexp (rather than what the regexp finds)
/<\zs[^>]*\ze>	search for tag contents, ignoring chevrons (:h /\zs)
/<\@<=[^>]*>\@=	search for tag contents, ignoring chevrons
/<\@<=_[^>]*>\@=	search for tags across possible multiple lines
/ _p{-}	search for multiple line comments
/fred_s*joe/	any whitespace including newline (_)
/bugs\(\\)*bunny	bugs followed by bunny anywhere in file
:h _	help
:bufdo /searchstr/	multiple file search (use :rewind to recommence search)
:bufdo %s/searchstr/&/gic	multiple file search better but cheating (n, then a to stop)
?http://www.vim.org/	search backwards for a URL without backslashing
/\c\v([^aeiou]&\a){4}	search for 4 consecutive consonants

1.2 Substitution 1 TEXT MANIPULATION

1.1.1 Search for declaration of subroutine/function under cursor

```
:nmap gx yiw/\csub\<br/>function\)\s\+<C-R>"<CR>
```

1.1.2 Search for visually highlighted text

```
:vmap // y/<C-R>"<CR>
with spec chars
:vmap <silent> // y/<C-R>=escape(@", '\\/.*$^~[]')<CR><CR>
```

1.2 Substitution

```
general substitute command
:%s/fred/joe/igc
                                                             delete dos returns ^M
:%s/\r//g
:%s/\r/\r/g
                                                             turn dos returns ^M into real returns (fixes joined lines)
:%s= *\$==
                                                             delete end of line blanks
:%s= \+\$==
                                                             same as above
                                                             clean both trailing spaces AND dos returns
:%s#\s*\r\?\$##
                                                             same thing deleting empty lines
:%s#\s*\r*\$##
                                                             delete blocks of 3 empty lines
:%s/^\n\{3}//
:%s/^\n\+/\r/
                                                             compressing empty lines
                                                             delete html tags, leave text
:%s#<[^>]\+>##g
                                                             VERY USEFUL
:'a,'bg/fred/s/dick/joe/igc
:%s= [^ ]\+\$=&&=
                                                             duplicate end column
                                                             same as above
:%s= \f\+\$=&&=
:%s= \S\+\$=&&
                                                             usually the same
                                                             reverse fields separated by:
:s/\(.*\):\(.*\)/\2 : \1/
:%s/^\(.*\)\n\1\$/\1/
                                                             delete duplicate lines
                                                             delete to 1st pdf only
:%s/^.\{-}pdf/new.pdf/
:%s#\<[zy]\?tbl\_[a-z\_]\+\>#\L&#gc
                                                            lowercase with optional leading characters
                                                             delete possibly multi-line comments
:%s///
:help / \{-\}
                                                            help non-greedy
                                                            sub "fred" with contents of register "a"
:s/fred/a/g
```

1.2 Substitution 1 TEXT MANIPULATION

```
:s/fred/\=0a/g
                                                           better alternative as register not displayed
:%s/f+\.gif\>/\r\&\r/g | v/\.gif\$/d | %s/gif/jpg/
                                                           multiple commands on one line
                                                           then use @: to repeat
:%s/a/but/gie|:update|:next
:%s/suck\|buck/loopy/gc
                                                           ORing (must break pipe)
:s/\_\_date\_\_/\=strftime("%c")/
                                                           insert datestring
:%s:\(\(\\\\\+\\\)\{2}\\)str1:\1str2:
                                                           working with columns sub any str1 in col3
:%s:\(\w\+\)\(.*\s\+\)\(\w\+\)\$:\3\2\1:
                                                           swapping first and last column (4 columns)
:%s/\d\+/\=(submatch(0)-3)/
                                                           decrement numbers by 3
:g/loc\|function/s/\d/\=submatch(0)+6/
                                                           increment numbers by 6 on certain lines only
:%s#txtdev\zs\d#\=submatch(0)+1#g
                                                           better version of above
:%s/\(gg\)\@<=\d\+/\=submatch(0)+6/
                                                           increment only numbers gg\d\d by 6 (another way)
                                                           convert yy to 10,11,12 etc
:let i=10 \mid 'a,'bg/Abc/s/yy/=i/ \mid let i=i+1
:let i=10 | 'a,'bg/Abc/s/xx\zsyy\ze/\=i/ |let i=i+1
                                                           convert xxyy to xx11,xx12,xx13 (more presise)
:%s/"\([^.]\+\).*\zsxx/\1/
                                                           find replacement text, use \zs to simplify substitute
:nmap <leader>z :s#\<<c-r>=expand("<cword>")<cr>\>#
                                                           pull word under cursor into LHS of a substitute
:vmap <leader>z :<C-U>%s/\<<c-r>*\>/
                                                           pull visually highlighted text into LHS of a substitute
```

1.2.1 Filter all form elements into paste register

```
:redir @*|sil exec 'g#<\(input\|select\|textarea\|/\=form\)\>#p'|redir END
:nmap ,z :redir @*<Bar>sil exec
  \ 'g@<\(input\<Bar>select\<Bar>textarea\<Bar>/\=form\)\>@p'<Bar>redir END<CR>
```

1.2.2 Substitue within substituion

```
:%s,\(all/.*\)\@<=/,_,g
:s#all/\zs.*#\=substitute(submatch(0), '/', '_', 'g')#
same thing
sub by splitting line, re-joining
sub sub ys splitting line, re-joining
sub inside sub</pre>
```

1.2.3 Substituting a visual area

```
:'<,'>s/Emacs/Vim/g | remember you DONT type the '<.'>
gv | re-select the previous visual area (ULTRA)
```

1.3 Global command display

```
:g/gladiolli/#
                                                                                  display with line numbers (YOU WANT THIS!)
                                                                                 dick
 :g/fred.*joe.*dick/ & display all lines fred,joe
 :g/\<fred\>/
                                                                                  display all lines fred but not freddy
 :g/^\s*\$/d
                                                                                  delete all blank lines
 :g!/^dd/d
                                                                                  delete lines not containing string
 : v/^dd/d
                                                                                 delete lines not containing string
                                                                                 not line based (very powerfull)
 :g/fred/,/joe/d
 :g/----/.-10,.d & delete string
                                                                                  10 previous lines
                                                                                 delete empty lines but only between ...
 :g/{/ ,/}/- s/n+/r/g
 : v/\S/d
                                                                                  delete empty lines (both types)
 :v/./,/./-j
                                                                                  compress empty lines
 :g/^\$/,/./-j
                                                                                  compress empty lines
 :g/<input\|<form/p
                                                                                  ORing
                                                                                  double space file (pu = put)
 :g/^/put_
 :g/^/m0
                                                                                  reverse file (m = move)
 :'a,'b/^/m'b
                                                                                  reverse a section a to b
 :g/^/t.
                                                                                  duplicate every line
 :g/fred/t\$
                                                                                  copy lines matching fred to EOF
 :g/stage/t'a
                                                                                  copy lines matching stage to marker a
 g/(^I[^^I]*)/{80}/d
                                                                                  delete all lines containing at least 80 tabs
 :'a,'bg/somestr/co/otherstr/
                                                                                 match all lines containing "somestr" between markers a & b
                                                                                  as above but also do a substitution
 :'a,'bg/str1/s/str1/&&&/|mo/str2/
 :%norm jdd
                                                                                  delete every other line
:.,\$g/^\d/exe "norm! \"
                                                                                  increment numbers
:'a,'bg/\d\+/norm! ^A
                                                                                  increment numbers
                                                                                  append all lines fred to register a (empty reg a first with qaq.)
 :g/fred/y A
```

1.5 Changing case 1 TEXT MANIPULATION

```
:g/fred/y A | :let @*=@a
                                                                              put into paste buffer
:let @a="|g/Barratt/y A |:let @*=@a
:'a,'b g/^Error/ . w >> errors.txt
                                                                              write out to errors.txt
:g/./yank|put|-1s/''/g|s/.*/Print '&'/
                                                                              duplicate every line in a file wrap a print " around each duplicate
:g/^MARK\$/r tmp.ex | -d
                                                                              replace string with contents of a file, -d deletes the "mark"
:g/<pattern>/z#.5
                                                                              display with context
:g/<pattern>/z#.5|echo "======="
                                                                              display beautifully
:g/|/norm 2f|r*
                                                                              replace 2nd — with a star
:nmap <f3> :redir @a<cr>:g//<cr>:redir END<cr>:new<cr>:put! a<cr><cr>
                                                                              send output of previous global command to a new window
```

1.4 Global combined with substitute (power editing)

1.5 Changing case

guu	lowercase line
gUU	uppercase line
Vu	lowercase line
VU	uppercase line
g\$\sim\$\$\sim\$	flip case line
vEU	upper case word
vE\$\sim\$	flip case word
ggguG	lowercase entire file
lem:lem:lem:lem:lem:lem:lem:lem:lem:lem:	titlise visually selected text (map for .vimrc)
:%s/[.!?]_s\+\a/\U&\E/g	uppercase first letter of sentences
g <c-g></c-g>	count words in text file

1.8 Essential 1 TEXT MANIPULATION

1.6 Reformatting text

```
gq}
gqap
ggVGgq
ggVGgq
vgq
reformat a paragraph
format a paragraph
reformat entire file
current line
:s/.\{,69\};\s*\|.\{,69\}\s\+/&\r/g
break lines at 70 chars, if possible after a ';'
```

1.7 Deletion without destroying buffer

```
"_d | what you've ALWAYS wanted delete word (use blackhole)
```

1.8 Essential

```
find word under cursor () (forwards/backwards)
                                     match brackets and tags \{\}, [], (), etc.
                                     repeat last modification
                                     repeat last: command (then @@)
@:
<C-N><C-P>
                                     word completion in insert mode
                                     line complete SUPER USEFUL
<C-X><C-L>
/<C-R><C-W>
                                     pull onto search/command line
/<C-R><C-A>
                                     pull onto search/command line
:set ignorecase
                                     you nearly always want this
:syntax on
                                     colour syntax in perl, HTML, PHP etc.
                                     list all help topics containing regexp (TAB to step through list)
:h regexp
                                     read from vimrc
:nmap ,s :source \$VIM/_vimrc
```

1.8 Essential 1 TEXT MANIPULATION

2 File Manipulation

2.1 Exploring

:Exp(lore) file explorer (note: capital E) file explorer in split window :Sex(plore) :ls list of buffers :cd .. move to parent directory list of files :args change to directory of current file :lcd %:p:h :autocmd BufEnter * lcd %:p:h change to directory of current file automatically ¹ buffer explorer list of buffers \be \bs buffer explorer (split window)

2.2 Opening files & other tricks

open file name under cursor (SUPER) gf :nnoremap gF :view open file under cursor, create if necessary display hex,ascii value of char under cursor ga ggVGg? rot13 whole file ggg?G rot13 whole file (quicker for large file) rot13 from line 8 :8 | normal VGg? :normal 10GVGg? rot13 from line 8 increment, decrement number under cursor <c-a>,<c-x> c-r>=5*5insert 25 into text (mini-calculator) :e main_<tab> tab completes include NAME of file in text (insert mode) $main_<c-x><c-f>$

¹Script required: bufexplorer.vim http://www.vim.org/script.php?script_id=42

2.4 File-name manipulation 2 FILE MANIPULATION

2.3 Multiple files management

:bn	goto next buffer
:bp	goto previous buffer
:wn	save file and move to next (super)
:wp	save file and move to previous
:bd	remove file from buffer list (super)
:bun	buffer unload (remove window but not from list)
:badd file.c	file from buffer list
:b 3	go to buffer 3
:b main	go to buffer with main in name eg main.c (ultra)
:sav php.html	save current file as php.html and "move" to php.html
:sav! %<.bak	save current file to alternative extension (old way)
:sav! %:r.cfm	save current file to alternative extension
:sav %:s/fred/joe/	do a substitute on file name
:sav %:s/fred/joe/:r.bak2	do a substitute on file name & ext.
:!mv % %:r.bak	rename current file (DOS use rename or del)
:e!	return to unmodified file
:w c:/aaa/%	save file elsewhere
:e #	edit alternative file (also ctrl-^)
:rew	return to beginning of edited files list (:args)
:brew	buffer rewind
:sp fred.txt	open fred.txt into a split
:sball,:sb	split all buffers (super)
:scrollbind	in each split window
:map <f5> :1s<cr>:e #</cr></f5>	pressing F5 lists all buffers, just type number
:set hidden	allows to change buffer w/o saving current buffer
	•

2.4 File-name manipulation

:h filename-modifiers	help
:₩ %	write to current file name
·₩ %:r.cfm	change file extention to cfm

2.7 Modelines 2 FILE MANIPULATION

:!echo %:p
:!echo %:p:h

<C-R>%

"%p

/<C-R>%

full path & file name
full path only
insert filename (insert mode)
insert filename (normal mode)
search for file name in text

2.5 Command over multiple files

:argdo %s/foo/bar/e
:bufdo %s/foo/bar/e
:windo %s/foo/bar/e
:argdo exe '%!sort'|w!
operate on all files in :args
operate on all buffers
operate on all windows
include an external command

2.6 Sessions (set of files)

gvim file1.c file2.c lib/lib.h lib/lib2.h
:mksession
gvim -S Session.vim
| load files for "session"
| create a session file (default session.vim)
| reload all files

2.7 Modelines

2.7.1 Creating your own GUI Toolbar entry

amenu Modeline.Insert\ a\ VIM\ modeline
 \ \ <esc><esc>gg0vim:ff=unix ts=4 ss=4<CR>vim60:fdm=marker<esc>gg

2.8 Markers & moving about

jump to last modification line (SUPER) jump to exact spot in last modification line cycle through recent changes (oldest first) ² g; reverse direction 3 g, show entire list of changes :changes :h changelist help for above <C-0> retrace your movements in file (starting from most recent) retrace your movements in file (reverse direction) <C-I> list of your movements :ju(mps) :help jump-motions explains jump motions list of all your commands :history commandline history :his c search history :his s search history window (puts you in full edit mode) q/ commandline history window (puts you in full edit mode) q: history Window

2.9 Editing/moving within insert mode

<C-U> delete all entered

 $[\]frac{2}{3}$ (new in vim 6.3)

 $^{^{3}}$ (new in vim 6.3)

2.10 Abbreviations & maps 2 FILE MANIPULATION

2.10 Abbreviations & maps

```
:'a,'bw! c:/aaa/x
:map <f7>
             :r c:/aaa/x
:map <f8>
:map <f11> :.w! c:/aaa/xr<CR>
:map <f12> :r c:/aaa/xr<CR>
                                                                 list of abbreviations beginning php
                       :ab php
                                                                 list of maps beginning,
                       :map ,
                                                                 allow use of F10 for win32 mapping (:h winaltkeys)
                      set wak=no
                       <CR>
                                                                  enter
                       <ESC>
                                                                  escape
                                                                 backspace
                       <BACKSPACE>
                       <LEADER>
                                                                  backslash
                       <BAR>
                       <SILENT>
                                                                  execute quietly
                                                                 yank all variables into register a
                      iab phpdb exit("<hr>Debug <C-R>a ");
```

2.10.1 Display RGB colour under the cursor eg #445588

:nmap <leader>c :hi Normal guibg=#<c-r>=expand("<cword>")<cr><cr>

3.2 Appending to registers 3 REGISTERS

3 Registers

3.1 List your registers

```
display contents of all registers
:reg
                   display content of individual registers
:reg a
                   retrieve numeric registers one by one
"1p....
:let @y='yy@"'
                   pre-loading registers (put in .vimrc)
                   empty register "q"
qqq
                   clear register a
:let @a=@_
:let @a=""
                   clear register a
                   copy register a to paste buffer
:let @*=@a
```

3.2 Appending to registers

Yank 5 lines into "a" then add a further 5

```
"a5yy
10j
"A5yy
```

3.3 Using a register as a map (preload registers in .vimrc)

```
:let @m=":'a,'bs/"
:let @s=":%!sort -u"
```

3.4 Redirection & paste register

```
:redir @*
:redir END
:redir >> out.txt
```

redirect commands to paste buffer end redirect redirect to a file 3.5 Useful tricks 3 REGISTERS

```
"*yy
"*p
:'a,'by*
:%y*
:.y*
:nmap p :let @* = substitute(@*,'[^[:print:]]','','g')"*p

yank to paste
insert from paste buffer
yank range into paste
yank whole buffer into paste
yank current line to paster
filter non-printable characters
```

3.4.1 Copy full path name

unix:

```
nnoremap <F2> :let @*=expand("%:p") <cr>
```

windows:

```
nnoremap <F2> :let @*=substitute(expand("%:p"), "/", "\\", "g")<cr>
```

3.5 Useful tricks

"ayy@a execute "vim command" in a text file
yy@" same thing using unnamed register
u@. execute command JUST typed in
:norm qqy\$jq paste "normal commands" without entering insert mode

4.2 External programs 4 ADVANCED

4 Advanced

4.1 Command line tricks

```
cat xx | gvim - -c "v/^dd^{-3-9}/d"
                                                            filter a stream
                                                            edit a stream!
ls | gvim -
gvim ftp://www.somedomain.com/index.html
                                                            uses netrw.vim
gvim -h
                                                            help
gvim -o file1 file2
                                                            open into a split
                                                            jump to "main"
gvim -c "/main" joe.c & open joe.c
gvim -c "%s/ABC/DEF/ge | update" file1.c
                                                            execute multiple command on a single file
gvim -c "argdo %s/ABC/DEF/ge | update" *.c
                                                            execute multiple command on a group of files
gvim -c "argdo /begin/+1,/end/-1g/^/d | update" *.c
                                                            remove blocks of text from a series of files
gvim -s "convert.vim" file.c
                                                            automate editing of a file (ex commands in convert.vim)
gvim -u NONE -U NONE -N
                                                            load vim without .vimrc and plugins (clean vim)
gvim -c 'normal ggdG"*p' c:/aaa/xp
                                                            access paste buffer contents (put in a script/batch file)
gvim -c 's/^{=0*/hardcopy!|q!}
                                                            print paste contents to default printer
                                                            vimdiff (compare differences)
gvim -d file1 file2
                                                            "put" difference under cursor to other file
dp
                                                            "get" difference under cursor from other file
:grep somestring *.php
                                                            internal grep creates a list of all matching files
                                                            use :cn(ext) :cp(rev) to navigate list
:h grep
```

4.2 External programs

```
:r!ls.exe
                                   reads in output of ls
                                   same thing (but replaces/filters current line)
!!date
:%!sort -u
                                   sort unique content
:'a,'b!sort -u
                                   as above
!1} sort -u
                                   sorts paragraph (note normal mode!!)
map <F9> :w:!c:/php/php.exe %
                                   run file through php
map <F2> :w:!perl -c %
                                   run file through perl
                                   convert txt to html
:runtime! syntax/2html.vim
```

4.3 Recording 4 ADVANCED

4.3 Recording

qq	record to q
q	end recording
@ q	to execute
00	to repeat
500	to repeat 5 times
"qp	display contents of register q (normal mode)
<ctrl-r>q</ctrl-r>	display contents of register q (insert mode)
"qdd	put changed contacts back into q
@q	execute recording/register q
nnoremap] @1:wbd	combining a recording with a map (to end up in command mode)

4.3.1 Operating a Recording on a Visual BLOCK

define recording/register

qq:s/ to/ from/g^Mq

define Visual BLOCK

V

hit : and the following appears

: '<, '>

complete as follows

:'<,'>norm @q

4.6 vimrc essentials 4 ADVANCED

4.4 Quick jumping between splits

```
\label{eq:map_constraint} \begin{array}{lll} \text{map} & <\text{C}-\text{J}> & <\text{C}-\text{W}>\text{j}<\text{C}-\text{W}>\_\\ \text{map} & <\text{C}-\text{K}> & <\text{C}-\text{W}>\text{k}<\text{C}-\text{W}>\_\\ \end{array}
```

4.5 Visual mode basics

V	enter visual mode
V	visual mode whole line
<c-a></c-a>	enter VISUAL BLOCK mode
gv	reselect last visual area (ultra)
0	navigate visual area
"*y	yank visual area into paste buffer
V%	visualise what you match
V}J	join visual block (great)
V}gJ	join visual block w/o adding spaces
0 <c-v>10j2ld</c-v>	delete first 2 characters of 10 successive lines

4.6 vimrc essentials

```
set incsearch
set wildignore=*.o,*.obj,*.bak,*.exe
set shiftwidth=3
set vb t_vb=".
set browsedir=buffer

jumps to search word as you type
tab complete now ignores these
for shift/tabbing
set silent (no beep!)
make 'open directory' use current directory
```

4.6.1 Launching IE

```
:nmap ,f :update<CR>:silent !start c:\progra~1\intern~1\iexplore.exe file://\%:p<CR>
```

4.8 Pulling objects onto command/search line

4 ADVANCED

:nmap ,i :update<CR>: !start c:\progra~1\intern~1\iexplore.exe <cWORD><CR>

4.6.2 FTPing from vim

```
cmap ,r :Nread ftp://209.51.134.122/public_html/index.html
cmap ,w :Nwrite ftp://209.51.134.122/public_html/index.html
gvim ftp://www.somedomain.com/index.html # uses netrw.vim
```

4.6.3 Autocmd

```
autocmd bufenter *.tex map <F1> :!latex %
autocmd bufenter *.tex map <F2> :!xdvi -hush %<.dvi&
autocmd BufRead * silent! %s/[\r \t]\+\$//
autocmd BufEnter *.php :%s/[ \t\r]\+\$//e</pre>
```

programming keys depending on file type launch xdvi with current file dvi automatically delete whitespace, trailing dos returns same but only for php files

4.7 Conventional shifting and indenting

```
:'a,'b>>
:vnoremap < <gv
:vnoremap > >gv
>i{
    block shifting (builtin-repeat)
    block shifting (magic)
>%
```

4.8 Pulling objects onto command/search line

<C-R><C-W> pull word under the cursor into a command line or search

4.11 Perform an action on a particular file or file type

4 ADVANCED

4.9 Capturing output of current script

4.10 Inserting DOS carriage returns

```
:%s/$\<C-V><C-M>&/g
:%s/$\<C-Q><C-M>&/g
for Win32
:%s/$\\^M&/g
set list
that's what you type
for Win32
what you'll see where ^M is ONE character
display "invisible characters"
```

4.11 Perform an action on a particular file or file type

```
autocmd VimEnter c:/intranet/note011.txt normal! ggVGg?
autocmd FileType *.pl exec('set fileformats=unix')
```

Retrieving last command line command for copy & pasting into text

4.14 Advanced incrementing 4 ADVANCED

i<c-r>:

Retrieving last Search Command for copy & pasting into text

i<c-r>/

4.12 Inserting line number

```
:g/^/exec "s/^/".strpart(line(".")." ", 0, 4)
:%s/^/\=strpart(line(".")." ", 0, 5)
:%s/^/\=line('.'). ', '
```

4.13 Numbering lines

show line numbers map to toggle line numbers

number lines starting from arbitrary number in recording q repeat with @q increment existing numbers to end of file

4.14 Advanced incrementing

```
let g:I=0
function! INC(increment)
    let g:I =g:I + a:increment
    return g:I
end function
```

4.14.1 Create list starting from 223 incrementing by 5 between markers a,b

:let I=223

4.17 Syntax highlighting 4 ADVANCED

:'a,'bs/^/\=INC(5)/

4.14.2 Create a map for INC

cab viminc :let $I=223 \mid 'a,'bs/$/=INC(5)/$

4.15 Digraphs (non alpha-numerics)

```
display table
:digraphs
:h dig
                                                   help
i<C-K>e'
                                                   enters é
i<C-V>233
                                                   enters é (Unix)
                                                   enters é (Win32)
i<C-Q>233
                                                   View hex value of any character
ga
:%s/\[<C-V>128-<C-V>255\]//gi
                                                   where you have to type the Control-V
                                                   Should see a black square & a dotted y
:%s/\[-\]//gi
:%s/\[<C-V>128-<C-V>255<C-V>01-<C-V>31\]//gi
                                                   All pesky non-asciis
\%: exec "norm /\[\\x00-\\x1f\\x80-\\xff\]/"
                                                   same thing
y1/<C-R>"
                                                   Pull a non-ascii character onto search bar
```

4.16 Complex vim

```
:%s/\<\(on\\off\)\>/\=strpart("offon", 3 * ("off" == submatch(0)), 3)/g | swap two words
:vnoremap <C-X> <Esc>'."gvP"P | swap two words
```

4.17 Syntax highlighting

:set syntax=perl

force Syntax coloring for a file that has no extension .pl

4.20 Folding 4 ADVANCED

```
:set syntax off
:colorscheme blue
vim:ft=html:
:syn match DoubleSpace " "
:hi def DoubleSpace guibg=#e0e0e0
```

remove syntax coloring (useful for all sorts of reasons) change coloring scheme (any file in ~vim/vim??/colors) force HTML Syntax highlighting by using a modeline example of setting your own highlighting sets the editor background

4.18 Preventions and security

4.19 Taglist ⁴

```
:Tlist | display tags (list of functions)
<C-]> | jump to function under cursor
```

4.20 Folding

zf}	fold paragraph using motion
v}zf	fold paragraph using visual
zf'a	fold to mark
zo	open fold
zc	re-close fold

⁴Script required: taglist.vim (http://www.vim.org/scripts/script.php?script_id=273)

4.21 Renaming files 4 ADVANCED

4.21 Renaming files

Rename files without leaving vim

```
:r! ls *.c
:%s/\(.*\).c/mv & \1.bla
:w !sh
:q!
```

4.22 Reproducing previous line word by word

```
imap ] @@@<esc>hhkyWjl?@@@<cr>P/@@@<cr>3s
nmap ] i@@@<esc>hhkyWjl?@@@<cr>P/@@@<cr>3s
```

4.23 Reading MS-Word documents ⁵

```
:autocmd BufReadPre *.doc set ro
:autocmd BufReadPre *.doc set hlsearch!
:autocmd BufReadPost *.doc %!antiword "%"
```

4.24 Random functions

4.24.1 Save word under cursor to a file

```
function! SaveWord()
   normal yiw
   exe ':!echo '.@O.' >> word.txt'
endfunction
```

⁵Program required: Antiword (http://www.winfield.demon.nl)

4.25 Miscallaenous commands 4 ADVANCED

4.24.2 Delete duplicate lines

```
function! Del()
   if getline(".") == getline(line(".") - 1)
        norm dd
   endif
endfunction
```

4.24.3 Columnise a CSV file for display

```
:let width = 20
:let fill=' ' | while strlen(fill) < width | let fill=fill.fill | endwhile
:%s/\([^;]*\);\=/\=strpart(submatch(1).fill, 0, width)/ge
:%s/\s\+$//ge</pre>
```

4.24.4 Highlight a particular csv column

```
function! CSVH(x)
    execute 'match Keyword /^\([^,]*,\){'.a:x.'}\zs[^,]*/'
    execute 'normal ^'.a:x.'f,'
endfunction
command! -nargs=1 Csv :call CSVH(<args>)
```

Call with :Csv 5 to highlight fifth column

4.25 Miscallaenous commands

:scriptnames
:verbose set history?
:function
:func SearchCompl
list all plugins, .vimrcs loaded (super)
reveals value of history and where set
list functions
List particular function

4.27 Help

4.26 Vim traps

In regular expressions you must backslash + (match 1 or more)

In regular expressions you must backslash — (or)

In regular expressions you must backslash ((group)

In regular expressions you must backslash { (count)

/fred\+/
/\(fred\)\{2,3}/
/codes\(\n\|\s\)*where
/\vcodes(\n|\s)*where

matches fred/freddy but not free note what you have to break normal regexp very magic
